Axidian

Axidian Access

- A multi-factor authentication system
- Works with different authentication technologies :
  - Hardware & software OTPs
  - SMS & E-mail
  - Push- authentication
  - Smart cards & RFID cards
  - Biometrics

- Replace passwords with biometric authentication
- Single Sign- On To Business Apps

Axidian Privilege

- A PAM system
- Centralized management of connections to critical servers and applications
- Reinforced authentication for privileged identities
- Transparent use of privileged identities on authorized resources, without revealing the password
- Recording of privileged user activity
- Analysis of recorded user activity and investigation

Forcepoint

Next-Generation Firewall (NGFW)

- Includes Secure SD-WAN
- Zero Trust Network Access
- Advanced Malware Detection and Protection
- Intrusion prevention, and others
- Deploy from anywhere with the cloud
- Gain visibility and control over the SMC

Data Loss Prevention (DLP)

- Centralize data security policy management in a SaaS DLP platform
- Protection of a wide range of devices
- Simplify DLP management with more than 190 predefined data security policies
- Deploy in a cloud-based architecture built to scale
- Applying custom data models to millions of files

Secure Web Gateway

- Control Internet access
- Access to blocked sites
- Improved speed and bandwidth savings
- Enhanced security
